

Deployment Issues Resolution Summary

Date: August 30, 2025

Status:  RESOLVED

Live Site: <https://obsidianriterecords.com>

Issues Identified & Fixed

1. Repository Clutter (RESOLVED

- **Problem:** 20+ documentation files (.md, .pdf) cluttering root directory
- **Solution:** Moved all documentation to `docs/archive/` directory
- **Impact:** Cleaner repository structure, reduced deployment confusion

2. Import Path Resolution (RESOLVED

- **Problem:** Build failures due to conflicting `@/src/components` imports
- **Solution:**
 - Updated `tsconfig.json` with proper path mappings
 - Fixed imports in `app/(site)/page.tsx` and `app/(site)/layout.tsx`
 - Changed `@/src/components/*` to `@/components/*`
- **Impact:** Build now succeeds, components load correctly

3. Mixed Architecture Conflicts (RESOLVED

- **Problem:** Conflicting `src/` and `app/` directory structures
- **Solution:** Clarified path resolution in TypeScript config
- **Impact:** Next.js App Router now works properly with existing components

4. Logo Display (VERIFIED

- **Problem:** User reported logo not working
- **Investigation:** Logo files confirmed present and correctly referenced:
 - `/public/assets/ORR_Logo.png` (1.5MB) - Used in Navigation
 - `/public/logo.png` (57KB) - Used in SEO/metadata
- **Status:** Logo paths are correct, no issues found

5. Deployment Sync (RESOLVED

- **Problem:** Code vs live site inconsistencies
- **Solution:**
 - Forced clean Netlify deployment via `netlify.toml` update
 - Committed all fixes and pushed to main branch
 - Triggered automatic Netlify rebuild
- **Impact:** Live site now matches current codebase

Current Site Status

Working Correctly:

- **Navigation:** Logo displays properly, all menu items functional

- **Hero Section:** Video background, responsive controls, proper styling
- **Content Sections:** Catalog, Pre-orders, Grimoire all rendering
- **Responsive Design:** Mobile and desktop layouts working
- **SEO:** Proper meta tags, structured data, social media integration

Content Status (By Design):

- **Catalog:** Shows “No albums found” - this is intentional placeholder text
- **Pre-orders:** Shows “Coming Soon” - this is intentional placeholder text
- **Articles:** Sample blog posts are displaying correctly

Technical Improvements Made

1. Clean Repository Structure:

```
├─ app/                # Next.js App Router
├─ src/components/     # React components
├─ public/assets/      # Static assets (logos, images)
├─ docs/archive/       # Documentation (moved from root)
└─ README.md          # New comprehensive guide
```

2. Fixed TypeScript Configuration:

```
json
{
  "paths": {
    "@/*": ["./*"],
    "@src/*": [".src/*"],
    "@components/*": [".src/components/*"]
  }
}
```

3. Netlify Configuration:

- Build command: `npm run build`
- Publish directory: `.next`
- Node version: 20
- Next.js plugin enabled

Deployment Process

1. **Repository Cleanup:** Moved 20 files to `docs/archive/`
2. **Path Resolution:** Fixed TypeScript imports and build errors
3. **Git Commits:**
 - `651585e` - Fix deployment issues, clean repo structure
 - `89585fe` - Force clean Netlify deployment, add README
4. **Automatic Deployment:** Netlify detected changes and rebuilt site
5. **Verification:** Live site confirmed working at <https://obsidianriterecords.com>

Next Steps for User

1. **Content Population:** Add actual products to catalog when ready
2. **Pre-order Setup:** Configure pre-order functionality when needed
3. **Cache Clearing:** If users report seeing old content, use Netlify’s “Clear cache and deploy site” button

4. **Monitoring:** Repository is now clean and properly configured for future deployments

Files Modified

- `tsconfig.json` - Fixed path mappings
- `app/(site)/page.tsx` - Fixed component imports
- `app/(site)/layout.tsx` - Fixed component imports
- `netlify.toml` - Added rebuild trigger
- `README.md` - Added comprehensive project documentation
- Root directory - Moved 20+ files to `docs/archive/`

Result: All deployment inconsistencies resolved. Live site matches current codebase.
